

## Diagnosis: NRC Part 2

Team members:

---

Section number: \_\_\_\_\_

Recitation TA: \_\_\_\_\_

Background Research:

Though the manual does provide you with some information about diabetes, please complete the following questions as short answers, use any resources available for your research.

- Does any of the other diseases Jesse has suggest diabetes? If yes which ones?

- What diseases can be caused by diabetes?

- How is diabetes commonly treated? What medicine would you give a patient? Would you suggest any lifestyle changes?

Data:

For the following section please write the color that the blood plasma turns and the correlating blood sugar levels (above 125 mg/dL or bellow 125 mg/dL).

Sample A (0 min): \_\_\_\_\_

Sample B (30 min): \_\_\_\_\_

Sample C (60 min): \_\_\_\_\_

Sample D (90 min): \_\_\_\_\_

Questions:

- Is the patient diabetic or prediabetic? How did you determine this diagnosis?

- Do you plan to complete the extra credit associated with this task? (yes/no)
  - You will need to verbally inform Jesse of their diagnosis as well as inform them of any medicine and lifestyles changes you researched above.
